

Instructions for Use:

Respiratory Effort Snore & Body Position
Sensor (RESBP) for WatchPAT™ Central+

RESBP must be used with zzzPAT version 4.6.69 and above, WatchPAT™ 300 and WP200U embedded version 3.3228 and above

Indications for Use

The RESBP sensor is an accessory of the WatchPAT home care device for use with patients suspected to have sleep related breathing disorders. The integrated sensor monitors the snoring level, which aids in the evaluation of the severity of sleep related breathing disorders, and the body position which aids in the evaluation of the type of sleep related breathing disorders. The sensor also provides raw chest movement signal data to measure the subjects breathing during the night .

Description

The integrated sensor is powered by the WatchPAT™ device and does not require a battery. It is automatically activated by the WatchPAT™ when plugged into the Snore & Body position port. The snore sensor is an acoustic decibel detector. It uses a very sensitive microphone that responds to snoring and other sounds in the audio range and converts them to a small analog voltage that provides a clear, reliable indication of the presence of these sounds. The body position sensor uses a 3-axis accelerometer that provides a signal directly proportional to the patient's sleeping posture (supine, prone, right, left and sit). The chest movement signal uses the same 3-axis accelerometer to provide raw chest movement signal data for measuring subject's breathing during the night.

Specifications		
Snoring Sensor Technology	Sensitive microphone	
Body Position and Chest Movement	3-axis accelerometer	
Sensor Technology		
Signal Amplitude	0-3.3 V	
Connector Type	1 mm medical safety connector plug from Plastics1	
	Wire length: 3.2 foot (100 cm)	
Physical Size	1.3 inch diameter (32 mm diameter)	
Weight	12 gr	
Warranty	6 months	
Temperature	Operation	0 to 40° C
	Storage	-20 to 40 ° C
	Transport	-20 to 60 ° C
Humidity	Operating, Storage & Transport	0%-93%
		(non-condensing)
Atmospheric pressure	Operating, & Storage	10 - 15 psi
	Transport	8 - 15 psi

Preparing the Sensor

 Attach the round double sided adhesive sticker to the blue side of the sensor.

Applying the Sensor

Make sure the room you are sleeping in is as quiet as possible during the night, turn off any possible noise sources. When using the RESBP it is advised to sleep alone in the room.

- The sensor is attached to the patient's chest right under the sternal notch.
 (The sternal notch is the little U shape where the collar bones meet at the top of the breast bone).
- To position the sensor, attach it with the heart image facing up, after peeling off the round adhesive sticker and pressing against the skin.
- · Make sure the sensor is tight against the skin.
- · Secure the sensor in place with medical tape.

Cleaning the Sensor

Using 70% ethyl alcohol, thoroughly clean both sensor and cable.

A - Integrated RESBP sensor

A-RESBP Sensor Attachment B-Sternal notch

For Snoring and Body Position accuracy information please refer to WatchPAT™ 300 and WP200U Operation Manuals
